

TISSUE RESTORATION CENTER

PHYSICIAN-GUIDED HEALING

YOUR PROCEDURE CREATES THE FOUNDATION.

Give your body the nutritional building blocks to support what comes next.

Healing continues for weeks and months after your procedure. As tissues rebuild, strengthen and remodel, your body's nutritional needs change. **Tissue Restoration** is designed around those changing stages.

HOW YOUR BODY'S NEEDS CHANGE AS IT HEALS

Healing changes over time. Your physician's **Tissue Restoration** plan is designed to change with it.

STAGE (Timeframe)	WHAT YOUR BODY IS DOING (Typical Focus)	NUTRITIONAL SUPPORT (Stage-Specific)
 PRIME PREPARE Up to 10 days before procedure (when selected)	- Preparing for surgical stress - Increased nutritional demands - Normal immune response	 Stage-specific nutritional support aligned with preparation for healing.
 PHASE 1 EARLY HEALING Days 0–14 after surgery	- Tissue repair - Early collagen formation - Incision healing - Normal inflammatory response	 Stage-specific nutritional support aligned with early healing and tissue repair.
 PHASE 2 ACTIVE REBUILDING Days 15–45 after surgery	- New tissue formation - Increased collagen production - Developing tissue strength - Continued rebuilding	 Stage-specific nutritional support aligned with active tissue rebuilding and collagen development.
 PHASE 3 TISSUE MATURATION Days 46–135 after surgery	- Collagen organization - Tissue strengthening - Scar remodeling - Increasing tissue integrity	 Stage-specific nutritional support aligned with tissue strengthening and maturation.
 PHASE 4 LONG-TERM REMODELING Beyond Day 135 (when selected)	- Collagen remodeling - Scar maturation - Tissue adaptation - Continued tissue maturation	 Stage-specific nutritional support aligned with continued tissue remodeling and maturation.

HEALING REQUIRES BUILDING BLOCKS.

Your body does the work of rebuilding tissue. That work requires nutritional building blocks. **Tissue Restoration** provides stage-specific nutritional support as your body's needs change throughout healing.

Give your body the support it needs to do the work of healing.

YOUR PLAN IS SELECTED FOR YOU

Every procedure is different. Your physician selects the appropriate stages, timing and duration based on your procedure and healing needs.

Your procedure. Your healing timeline. Your physician's plan.

THE RIGHT SUPPORT. AT EVERY SELECTED STAGE.
ONE PROCEDURE. A COMPLETE APPROACH TO HEALING.
